TechAssist

Field Instrument Management Conveniently – From Anywhere

Site Technician Mobile Application

Mobile devices are becoming a key component of our daily work. We get our email, message to our co-workers, maps, data lookup, etc.

Why not check the status of your air monitoring system with your phone or tablet as well?

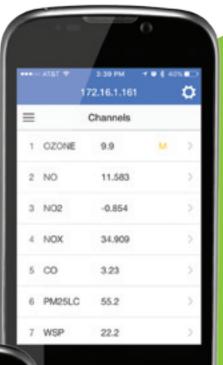

TechAssist does just that — it communicates with a web service hosted within your Model 8872 logger, and gives you most of the functionality of the Logger Toolbox, including:

- See current readings and flags for all channels
- Put channels in maint or offline
- See current calibration status
- Initiate or abort calibrations
- Review digital input/output status

All, of course, using a secure username/password login.
