

Agilaire^{LLC}

Hosted Data Management

For agencies that do not wish to manage their own servers, Agilaire can provide a complete managed and supervised hosting solution. Agency staff can access their system over the Internet and receive regular emailed report and alarm notifications. No more installing software updates, and automatic backups are performed and delivered to you on a defined schedule.

IT-Friendly

- Tier 3 hosting- Dedicated or Virtualized
- Redundant power, network
- Secure connections
- Intrusion Protection Systems (IPS)
- Regular Security / Vulnerability Reviews
- Fast recovery in any situation

Full Functionality

All available AirVision options including:

- Automatic Data Validation processor
- Full Editing / Reporting
- Asset / Work Item Tracking
- AgileWeb
- Sync configuration management
- Ambient and/or Source reporting
- MyAQI and Tech Assist Mobile Apps

Carefree

Updates are automatically loaded, tested, and you'll never have to run another update installation again. You can also access your data from any location, based on a preset security profile.

Adaptable

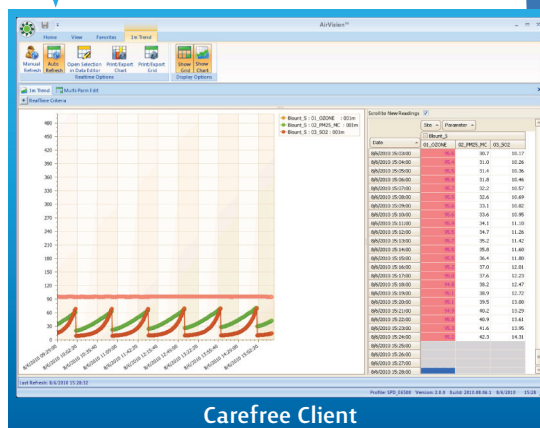

Web portal can be used to provide links to regulations, SOPs, manufacturer's manuals, as well as field forms and worksheets.

Frequently Asked Questions (FAQS)

Where is my data, and am I at risk of losing it?

This issue has historically been the barrier to hosted systems — that you can't physically touch your data. Agilaire can manage this concern by delivering regular backups of your data electronically or via physical medium, available for your use anytime.

Is the client web-based?

You can choose either a thick client or Web-based client. However, remember that Web-based clients have some special considerations:

Feature set — It's not possible to offer the same rich user experience and interface available in a regular client through a web browser. Mostly this is noticed in the data editor, AirVision's web client reports are identical in function.

Speed — Client-side rendering is always vastly faster than server-side rendering. Again, this is more noticeable in editors and forms than reports.

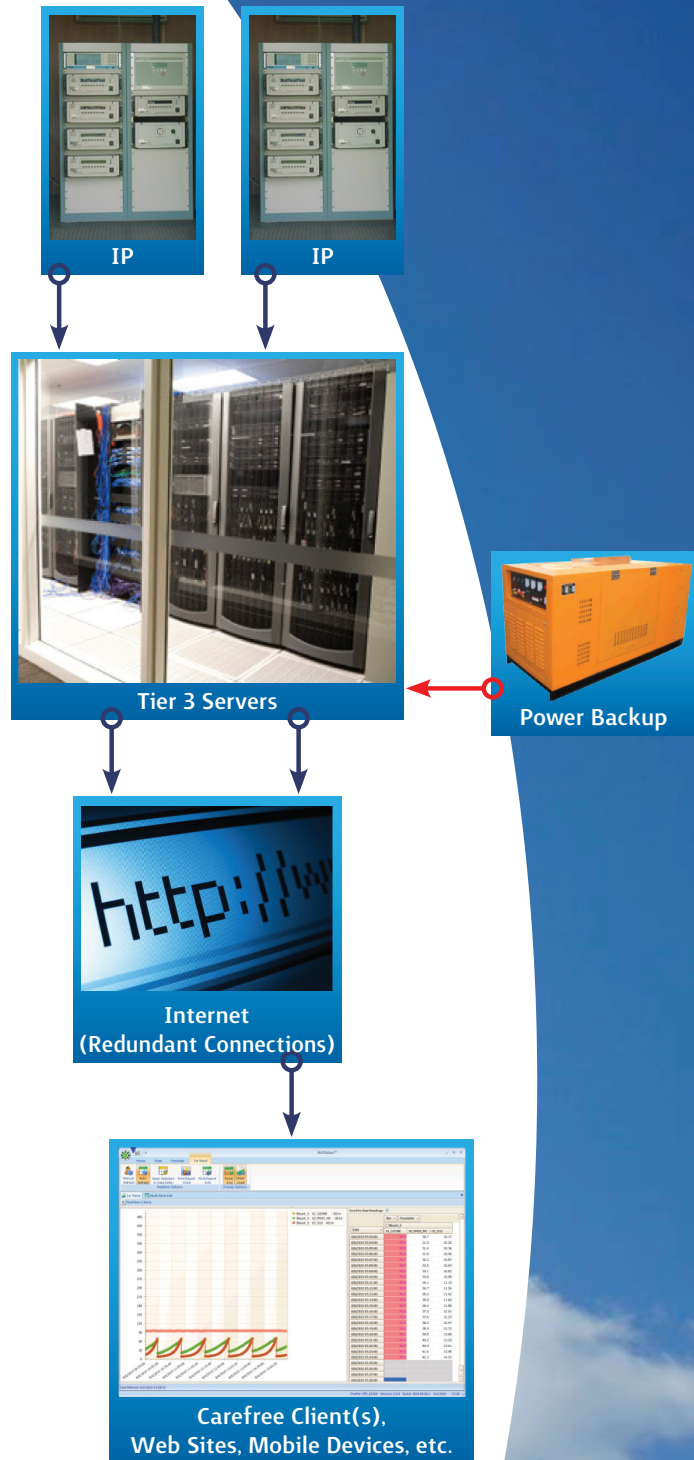

Browser Compatibility — Are you using IE? Firefox? Chrome? Which version? Modern browsers are better on this issue, but old browsers (e.g., before IE 9) can be problematic.

What is the cost?

The base hosting cost depends on the AirVision feature set selected, the number of anticipated users, and the amount of data to be retained. A typical AirVision Standard Edition with TCP-poll sites can be hosted for as little as \$400 per month. Additional cost items include provision for telephone modem polled sites (mostly phone line and long distance, billed at cost only, plus an equipment charge), optional AgileWeb hosting, etc.

What happens if I terminate my service?

Agilaire will deliver the database and a current copy of AirVision to you, and can optionally provide a delivered server, ready to go.
