# April 2022 Newsletter

## 2022 Conference Schedule

As we emerge from the shadow of this 2-year pandemic, we are excited to be participating in and sponsors for the National Tribal Forum on Air Quality May 2 - 6 and the National Air Monitoring Conference in Pittsburgh on August 22-25. Come by our booth and help us celebrate what is hopefully the end of the restrictions that have kept us apart and virtual for so long.

## Version 4.4 Updates Coming

We continue with improvements to AirVision, with an upcoming release later this Spring adds:

- Added "lookback" period in Average Rollup Utility to account for time zones and communication outages.
- Small instrument integration for: AQMesh and AirQWeb
- added option for Modbus instruments to combine registers being requested into blocks to reduce instrument processing load.
- Improvements to MultiPhase Cal Report
- Handling for new EPA "1F" null code requirement

## Reminder: New Application Notes page

We've always had a large library of application notes to draw on for various technical support questions, sometimes very focused topics. We have now made the most commonly used notes available in the Support section of our web page. Check it out!

Support> Online Help > [Application Notes](#)

As always, thanks again for your support, suggestions, and business!

Sincerely,

Steve Drevik, President  
& Team at Agilaire, LLC

*Release 4.0.58 is now  
Available*

[Click Here for AirVision Release  
Notes](#)

*Free Health App for the  
General Public*

[MyAQI](#) provides real-time air quality information based on the closest monitoring site to you. Unlike other AQI maps, MyAQI allows you to personalize the AQI reported to your particular health concerns and also allows you to consider the synergistic effects of multiple pollutants on your body (which the traditional AQI ignores).
