August 2022 Newsletter

Important Announcement for Users with Purple Air Monitors in AirVision

Purple Air is obsoleting their old API in August and will be requiring sensors to move to the new API at the same time. The time period of 'overlap' between the two APIs is unknown, but appears that it will be a very short period of time (perhaps two weeks). We have a new application note and script to add the necessary changes to AirVision on our FTP site, contact support@agilaire.com for download details.

Users with Purple Air monitors in AirVision should contact Purple Air for new IDs and API keys, and identify the time period that their monitor will be affected.

AirVision 4.5 Released

AirVision 4.5 is available for download. Enhancements include:

- Several scheduled tasks now have a user-configurable lookback period that can be used in lieu of the 'last successful run time' logic. These tasks include Data Average Rollup, Calculate Math Parameters (if not set, math retains the default 120 period lookback).
- Scheduled tasks also have an ability to shift the starting and end times (to account for time zone variations or other data input delays).
- Annotations are now a displayed and searchable field in the Average Data Editor
- Added option to display 95th percentile line in Average Data Editor / Graph (when one parameter selected).
- Asset Tracking: added ribbon button to change asset type. Added new asset types to distinguish bottles vs calibrators, and to add zero air generators.
- Improved performance of large AQS reports.
- AgileWeb: web client (with user login) now supports Asset Tracking and Work Items menu selections.
- PAMS: Blank checks now generate both RB and null-coded RD transactions.

Null code defaults to "MB" automatically, no user input required.

- 8872: Storage of average intervals can be completely disabled (e.g., if only two intervals are desired for storage)

Full release notes are available at <https://agilaire.com/software-version-info/>

Contact support@agilaire.com for download details. Note that users who are not already on Version 4.4 will need to install .NET Framework 4.8.

Do you have new staff needing training on the 8872 or AirVision?

Contact us at info@agilaire.com for September or October virtual trainings to acquaint new employees with the 8872 and AirVision.

**AirVision September 21-22 (Wednesday and Thursday)
Friday September 23 Training on 8872**

**October 5-6 (Wednesday and Thursday)
Friday September 23 Training on 8872**

New Employees?

Please have new staff who interface with AirVision and the 8872 to sign up for receiving our newsletters sent out 2-3 times a year with pertinent updates and information via this sign up link: <http://eepurl.com/h16m1D>

As always, thanks again for your support, suggestions, and business!

Sincerely,

Steve Drevik, President
& Team at Agilaire, LLC

Free Health App for the General Public

[MyAQI](#) provides real-time air quality information based on the closest monitoring site to you. Unlike other AQI maps, MyAQI allows you to personalize the AQI reported to your particular health concerns and also allows you to consider the

synergistic effects of multiple
pollutants on your body (which the
traditional AQI ignores).
