November 2023 Air Newsletter

Recent AirVision / AV-Trend Updates (4.7.98)

It's getting towards the end of the year, and in preparation for the holidays, we wanted to put a bow on some final improvements and fixes before our end of the year "tools and structure" update / code freeze. These include:

- Performance improvements in File Import, ADVP. Affected builds / versions after 4.6.1
- Work Item Notifications- only send one notification by default now, but you can opt into resends
- User interface improvements in Asset tracking (popup detail forms for asset and cert history)
- Batch Reading Updater now has "Approve" action.
- Performance improvements in Sample Data Editor. Affected builds / versions after 4.6.139
- Option to suppress ">" from problematic Modbus / GSI instruments (8872 only)
- Added Method Code reporting in AQCSV for cases where Method Code not stored (File Import / Direct Poll, Data Rollup)

Note that if you recently upgraded to 4.7.15, this release isn't a necessary upgrade, unless you want to obtain any of the enhancements listed, or are experiencing performance issues with File Import or ADVP.

User Group --> New Release Seminars

Our original idea of having a User Group more driven by users and user presentations hasn't really come to fruition. We understand- everyone is busy, and having to do more with less. So, we will re-tool our User Group into seminars to update users on new features and enhancements, and provide recordings of those sessions to users who aren't able to make the Zoom meeting.

We will schedule the next seminar for Tuesday, November 28th at 2pm Eastern Time. Zoom info to be emailed to those on our User Group List (who received emails for the last meeting). If you haven't attended before and want to be put on the list for that link, please email vkay@agilaire.com

As always, thanks again for your support, suggestions, and business!

Sincerely,
Steve Drevik
