September 2023 Air Newsletter

It's the end of summer, so what does that mean?

An end to the oppressive heat, surely, concern about tropical storms depending on where you live, but also it's traditionally time for a major AirVision update, Version 4.7.

Protocol Gas Verification Program (PGVP)

We're very pleased to announce completion of support for USEPA's Protocol Gas Verification Program (PGVP), with support for AQS transactions for 1-point QC and for Annual PE transactions.   A short video detailing the use of the new tools can be viewed at PGVPIntro (Click Here).

Other helpful changes and user interface improvements include:

- Got too many Favorites? Now you can create folders and sort them!
- Sample Data Editor includes a right click option to "Set MDL" for PAMS data editing.
- Batch Editor now includes a 'lock data' option.
- AgileWeb can now set sites to display as a box or circle, so different site types can be distinguished (e.g., PM only vs. multipollutant sites, or show your small sensor data alongside the regular sites).
- When you create a new Modbus instrument in Data Source Details / Logger Channels, a ribbon option allows you to automatically create default primary measurements or default diagnostic channels (pressure, flow, sample temp).
- Basic Data Export can now generate N-hour block or rolling averages as part of the report.

Contact support@agilaire.com for information on how to get the update.

Going into the rest of the year

We continue to monitor any updates to the EPA Asset Tracking Requirements (please advise if you hear anything on an agency/EPA call).   Other future planned work includes a new Diurnal time plot for data QA, and a new data cross-flagging tool.

8872 Updates:

The 8872 "C" is now upgraded with a new faster CPU and double the amount of RAM and SSD space as the previous "B" model.   The new model also has support for dual HDMI monitors, and includes the TPM chip required for Windows 11 support.   Upgrade kits and field update instructions are available for existing "B" models (although you don't have the second rear HDMI port).

Also, while our work to migrate the applications to .NET core continue, our original hope was to offer the 8872 with a Linux option, but as of this time, there is not a version of SQL Management Studio for Ubuntu, making routine support and maintenance impossible without additional devices and external connections. We will continue to explore options, but fortunately, 2023 saw a dramatic drop of issues related to Windows Updates with the 8872s.

Full release notes are available on our Release Notes webpage.

Contact support@agilaire.com for download details.   Note that users who are not already on Version 4.4 will need to install .NET Framework 4.8.

All requests for Support/ New Issue Submissions made via email should be sent to: support@agilaire.com

Agilaire Newsletter:
Please share this Agilaire newsletter (via this link) with others that you believe would benefit from its contents:

As always, thanks again for your support, suggestions, and business!

Sincerely,
Steve Drevik
